PATENT COOPERATION TREATY

From the INTERNATIONAL BUREAU

PCT

NOTHECATION OF TRANSMITTAL
OF COPIES OF TRANSLATION
OF THE INTERNATIONAL PRELIMINARY REPORT
ON PATENTABILITY
(CHAPTER I OR CHAPTER II
OF THE PATENT COOPERATION TREATY)
(PCT Rule 72.2)

To:

KOIKE, Akira 11th Floor, Yamato Seimei Bldg. 1-7, Uchisaiwai-cho 1-chome Chiyoda-ku, Tokyo 100-0011 JAPON

Date of mailing (day/month/year) 25 August 2005 (25.08.2005)	
Applicant's or agent's file reference SK03PCT136	IMPORTANT NOTIFICATION
International application No. PCT/JP2003/015884	International filing date (day/month/year) 11 December 2003 (11.12.2003)
Applicant	SONY CORPORATION et al

1. Transmittal of the translation to the applicant.

The International Bureau transmits herewith a copy of the English translation made by the International Bureau of the international preliminary examination report established by the International Preliminary Examining Authority.

2. Transmittal of the copy of the translation to the elected Offices.

The International Bureau notifies the applicant that copies of that translation have been transmitted to the following elected Offices requiring such translation:

EP, KR

The following elected Offices, having waived the requirement for such a transmittal at this time, will receive copies of that translation from the International Bureau only upon their request:

US

3. Reminder regarding translation into (one of) the official language(s) of the elected Office(s).

The applicant is reminded that, where a translation of the international application must be furnished to an elected Office, that translation must contain a translation of any annexes to the international preliminary examination report.

It is the applicant's responsibility to prepare and furnish such translation directly to each elected Office concerned (Rule 74.1). See Volume II of the PCT Applicant's Guide for further details.

The International Bureau of WIPO 34, chemin des Colombettes 1211 Geneva 20, Switzerland Authorized officer

The invention that is set forth in claims 3 and 6 does not involve an inventive step in the light of documents 1 and 2 cited in the international search report, and documents 3 and 4, which are newly cited in

1501/05 03/1380

the international preliminary examination report.

Document 1 discloses a wireless communication device for a wireless LAN system that is capable of conducting communication over two wireless frequency bands with different transmission speeds and different frequency bands, wherein in cases when radio waves that cause interference are encountered during communication, the wireless communication device detects for the interference and switches the communication channel to a channel with no interference by switching the antenna and the transmission/reception circuit.

In addition, document 2 discloses a wireless communication module which can be used in an electronic device that is capable of conducting communication over a plurality of frequency bands, wherein said wireless communication module comprises a wireless communication antenna with a plurality of resonance frequencies that can be selected by switching the state of the antenna element pattern by means of a plurality of MEMS switching elements.

In addition, the feature of reducing power consumption by switching to a lower transmission speed is well known, as disclosed in documents 3 and 4.

Consequently, it is considered to be easy for a person skilled in the art to conceive of configuring so that in the invention that is disclosed in document 1, the antenna module is configured in the manner that is disclosed in document 2, and the frequency band is switched to a lower frequency band in order to switch the transmission speed and thereby reduce power consumption, as disclosed in documents 3 and 4.

The invention that is set forth in claim 4 does not involve an inventive step in the light of documents 1, 2 and 5 cited in the international search report, and documents 3 and 4, which are newly cited in the

International application No. PCT/JP 03/15884

international preliminary examination report.

The feature of determining which frequency band to select from among two given frequency bands on the basis of pre-set operation modes is well known, as disclosed in document 1 (paragraph [0053]), document 5 (paragraph [0023]) and document 3 (paragraph [0071]).

The invention that is set forth in claims 5 and 6 does not involve an inventive step in the light of documents 1 and 2 cited in the international search report, and claims 3, 4 and 6, which are newly cited in the international preliminary examination report.

Document 1 (paragraph [0053]) discloses the feature of selecting the channel that exhibits the best transmission quality by sequentially switching between the frequencies of two channels, determining which channel suffers from the least interference on the basis of the bit error rate of the demodulated data or the like and then setting the channel in question as the communication channel. Furthermore, the feature of determining the reception state from the strength of the electric field or the like is well known, as disclosed in, for example, document 6; therefore, it is thought that a person skilled in the art could control the switching of the channels according to the strength of the electrical field in the invention that is disclosed in document 1, as appropriate, in the light of document 6.
